Data: JAHED M, KARLEN T</p>	<p>A(12-V4A) D(8-B5)</p>
<p><u>NOVELTY</u> Hair fixing composition in the form of an aerosol or non-aerosol spray, mousse, gel, wax, cream or lotion contains (A) an amphoteric copolymer comprising monomer units with quaternary ammonium groups and monomer units with optionally neutralized acid groups, and (B) a polymer that contains no quaternary ammonium groups and comprises monomer units with optionally neutralized acid groups.</p> <p><u>USE</u> For styling the hair.</p> <p><u>ADVANTAGE</u> The composition provides good hold and good wet combability.</p>	<p>TECHNOLOGY FOCUS Polymers - Preferred Polymer (A): This is a copolymer of (a) acrylic acid, methyl acrylate and methacrylamidopropyl trimethyl ammonium chloride, (b) acrylamidopropyl trimethyl ammonium chloride and acrylates or (c) acrylamide, acrylamidopropyl trimethyl ammonium chloride, 2-amidopropylacrylamide sulfonate and dimethylaminopropylamine. Preferred Polymer (B): This is an optionally-crosslinked vinyl acetate/crotonic acid, acrylic acid/alkyl acrylate/N-alkylacrylamide, vinyl methyl ether/maleic anhydride or vinyl acetate/crotonic acid/vinyl alkanoate copolymer.
